Common Geographical Indication Logo

Why in news?

\n\n

Recently, the Commerce and Industry Minister unveiled a tricolour logo that is common for all Geographical Indications (GI), with a tagline “invaluable treasures of incredible India”.

\n\n

What is Geographical Indication?

\n\n

\n

- GI indicates the ‘link’ between a product and the place it belongs to.
- The link could be the natural resources, climatic factor or human skills that render uniqueness to the product.
- The essential difference between GI and other intellectual properties (IP) is that, GI is a collective intellectual property right.
- It is thus owned by all the producers within the defined GI territory.
- Unlike this, the IPs like patent and trademark are owned by an individual or a business entity.
- So unlike the commercial use of patent that would benefit an innovator or a firm, the commercialisation of GI would benefit all the producers in the GI territory.
- It could promote tourism and rural development, and some of the Sustainable Development Goals - empowering women, fostering sustainable communities and reducing poverty.

\n

\n\n

\n\n

What are the concerns in India in this regard?

\n\n

- \n
 - The potential of GI has not yet been realised in India.
 - \n
 - **Procedure** - Filing a GI application is a huge task that involves documenting historical evidences about the linkage of the product with the region.
 - \n
 - Also, the application has to be filed by an association or group of persons.
 - \n
 - So despite India's diversity in handicrafts or agricultural products, only about 320 products have so far been registered with the GI registry.
 - \n
 - Some of them include Kanchipuram saris, Darjeeling tea, Channapatna toys, Gir kesar mango, Sindhudurg and Ratnagiri Kokum, Kulu shawls, Ratlami sev, Pochampalli Ikat.
 - \n
 - **Commercialisation** - The efforts have so far mainly focused on the first step of filing GI applications (Part A of GI registration).
 - \n
 - Mere filing of the GI applications amounts to cultural accounting of regional products.
 - \n
 - But post registration activities in terms of utilising the GI certification as a marketing/branding tool has not been attempted in most products.
 - \n
 - This is due to limited awareness about GI in the country among producers, consumers and policy makers.

\n

- **Stakeholders** - As per the GI Act (1999), the term producer can include any one who 'deals'/'exploits' the GI product.

\n

- It could thus include a wide range of stakeholders including a trade facilitator, online marketer, who may or may not belong to the GI territory.

\n

- But the registered proprietors of GI fail to identify the value chain and do not register the authorised users (Part B of GI registration).

\n

- So the majority of the 'producers' (other stakeholders in the value chain) are unaware of the GI registration itself.

\n

\n\n

How could a logo help?

\n\n

\n

- After 15 years of the GI Registry coming into being, the GI logo that is common for all registered GIs is now in place.

\n

- Logos convey a specific message to the consumers about the product, as the ISI or Agmark assures about the quality.

\n

- Promotion of common GI logo will create an edge for GI products over similar products.

\n

- It will also bring more awareness among consumers in distant markets as well and result in increased demand.

\n

- It could enhance market access and preserve unique local economies, provided the producers benefit.

\n

- This will check distress migration, promote biodiversity, prevent artisans and farmers leaving their livelihoods.

\n

- Importantly, it will arrest the erosion of traditional knowledge and practices.

\n

\n\n

What are the challenges ahead?

\n\n

- \n
- Mere unveiling of the logo may not serve any purpose for the producers of registered GIs.
- \n
- Determining the protocols for actual use by 'producers' and preventing the misuse of the logo are essential tasks.
- \n
- Enormous human efforts and financial resources are required to position the common GI logo so that it is used as a marketing tool.
- \n
- The GI logo needs to be widely popularised for consumers to associate it with the uniqueness and authenticity of GI products.
- \n
- But the shortfalls in Part B registration make it difficult to identify the authorised users and check GI infringement.
- \n

\n\n

What should be done?

\n\n

- \n
- The use of common GI logo has to be inclusive of all the stake holders in the value chain.
- \n
- At the product level, besides the producer organisations, other stakeholders like traders, processors, packagers, etc should also be organised into groups/associations.
- \n
- These different associations should work in unison in the actual use of the logo in all their transactions.
- \n
- This is essential to promote the sale of genuine GI products and design strategies to prevent the misuse of the logo.
- \n
- Assuring consumers on the authenticity of the product would go a long way in increasing the demand and production.
- \n

\n\n

- \n
- **Marketing** - Efforts should start in India with all the State emporiums and handicraft hubs where products are on permanent display, to showcase GI products.

- \n
- There should be clear signboards with GI logos on the national highways or major bus/railway stations/airports about the GI Production centres in that region.
- \n
- Information about the sales points where the products may be procured should also be available.
- \n

\n\n
