

## AYUSH Doctors for Allopathic Care

### What is the issue?

\n\n

\n

- NMC bill proposed for a bridge course to enable AYUSH doctors to practice allopathic medicine in a limited capacity.

\n

- While this was a move to bridge the shortage in our health system, opposition to the proposal led the centre to delegate the idea to states for consideration.

\n

\n\n

### What is the controversy regarding AYUSH practitioners?

\n\n

\n

- Our traditional medicine constitutes five major streams namely AYUSH (Ayurveda, yoga and naturopathy, Unani, Siddha and homoeopathy).

\n

- Practitioners of these streams of traditional medicine have thus far been legally sanctioned to operate within their respective domains only.

\n

- “National Medical Commission Bill”, has proposed permitting AYUSH doctors to prescribe limited allopathic on completion of a bridge course.

\n

- This has triggered a controversy as a mere bridge course to enable allopathic practice is seen by some as akin to legitimising quackery.

\n

- Union government has withdrawn the proposal due to opposition, but it has nonetheless passed the buck to the state governments to consider the same.

\n

- As the government seeks to overcome manpower shortage through such quick fixes, protestors argue that the risk involved shouldn't be overlooked.

\n

\n\n

## **What is the state of our health infrastructure?**

\n\n

\n

- The last mile of healthcare delivery in India occurs through sub-centres and primary health centres (PHCs).

\n

- 61% PHCs have just one doctor, while nearly 7% are functioning without any

\n

- 33% of PHCs do not have a lab technician, and 20% don't have a pharmacist.

\n

- In states like Odisha, more than 3,000 government posts for doctors or about 50% of all government medical doctor posts are lying vacant.

\n

- India faces an acute shortage of allopathic doctors (about 5 lakh doctors are needed) and the present doctor-patient ratio stands a poor 1:1700.

\n

- In this context, unqualified medical practitioners have sprouted up in large numbers particularly in states such as UP, Jharkhand and Bihar.

\n

- While increasing the number of seats in medical colleges is a viable long term strategy, the immediate needs of our population are also too massive.

\n

\n\n

## **Is it logical to see AYUSH practitioners as fillers to address the problem?**

\n\n

\n

- "Ayushman Bharat Scheme" envisions upgraded sub-centres and PHCs as the fulcrum for delivering primary healthcare.

\n

- It is but unclear on how the staffing needs of these centres would be met in a uniform manner nationally.

\n

- Given the paucity of MBBS doctors, it makes sense to leverage the ready availability of large AYUSH practitioners for limited allopathic practice.

\n

- Appropriate bridge courses for AYUSH doctors, accompanied by sound regulatory mechanisms, will indeed help in them dole out allopathic

medicine.

\n

- The current outrage could've been primarily based on the measly 6 month duration for the bridge course, an aspect that could be addressed.

\n

- Notably, in courses like Ayurveda, nursing, physiotherapy or pharmacy, the curriculum has several strands similar to that of a MBBS course.

\n

- Hence, better course integration through additional training in pharmacology and medicine with clinical clerkships, could sufficiently equip AYUSH docs.

\n

\n\n

### How has such programs fared worldwide?

\n\n

\n

- In the U.S., a 2 year bridge program for “paramedics and nurses” designates them as “Physician Assistant” (PA) once they clear the certification exam.

\n

- Over the years, the program has grown in scale to address the shortfall in the U.S. health system and more than 8 million patients saw PAs in 2017.

\n

- Similar programs also exist in U.K. and New Zealand and have made significant contributions to the overall health metrics of those countries.

\n

- As of 2013 in Bangladesh, three-year training qualifies a sub-assistant community medical officer (SACMO) to practice.

\n

- Incidentally, 89% of healthcare delivery in rural Bangladesh is being taken care primarily by SACMOs.

\n

- Assistant doctors in China, clinical associates in South Africa, and assistant medical officers in Malaysia are all based on similar models.

\n

\n\n

### What is the way ahead?

\n\n

\n

- **The Idea** - Considering the enormity of the situation and the worldwide precedents, calling AYUSH bridge course “legal quackery” is a stretch.

\n

- A properly designed and imparted bridge course for limited allopathic practice and subsequent monitoring could indeed help in improving the health metrics.

\n

- Such providers can help in disease prevention, a dire need considering India's continuing burden of both communicable and non-communicable diseases.

\n

- Significantly, a strong AYUSH cadre could also help in curtailing irrational medical practice, and existing rampant abuse of drugs such as antibiotics.

\n

- **Implementation** - As a lot of technicalities are involved in designing the course and regulating it, the centre needs to take primacy in the process.

\n

- While implementing could be delegated to the states, it is not a prudent approach for the centre to have ceded the entire idea to states due to protests.
