## Ballooning State Debt

### Why in news?

\n\n

The newly elected government of Uttar Pradesh presented its first Budget last week.

\n\n

### What is the major issue?

\n\n

\n

- Uttar Pradesh was already deeply indebted, with a state debt to state GDP ratio of around 30%.

\n

- But, the BJP led government has **promised to waive off large amounts of agricultural debts** in its run up to election.

\n

- The loan waiver might cost as much as Rs 36,000 crore.

\n

- Further, the Union Finance Minister has specifically said that the central government would not pay for the loan waiver.

\n

\n\n

### How does the budget propose to manage this burden?

\n\n

\n

- The budget says, the extra spending will be managed through two changes from the interim Budget presented earlier.

\n

- First, the government has **reduced its power allocation** by Rs 16,800 crore.

- \n
- And second, total revenue is projected to increase by 18.6 per cent over the previous year.
  - \n
  - It turns out that much of this increase will, in fact, be **through grants from the Centre**, regardless of Finance Minister's assurances.
  - \n
  - According to the Uttar Pradesh Budget, grants from the Centre will grow by an unusually large 39 per cent to Rs 68,000 crore.
  - \n
  - If for some reason that largesse from the central government does not materialise, **then the state's fiscal deficit will only rise.**
  - \n

\n\n

### Is the problem unique to U.P.?

\n\n

- \n
- Other states that have promised farm loan waivers will **have similar problems** in raising revenue while meeting their fiscal targets.
  - \n
  - State-level finances were already showing signs of serious strain.
  - \n
  - The pressure is growing on other states across the country to meet demands from farmers under stress after two consecutive droughts followed by demonetisation.
  - \n
  - For the first time in a decade, the ratio of gross state fiscal deficits to their GDP **crossed the 3% threshold** to hit 3.6%.
  - \n
  - The **RBI report on state finances** also warned that, aside from loan waivers, state finances would suffer from the implementation of **7<sup>th</sup> Pay Commission** recommendations.
  - \n
  - States would also suffer from the revenue uncertainty associated with the implementation of the **goods and services tax.**
  - \n
  - Because of this, the capital expenditure might suffer, particularly expenditure targeted towards the agricultural sector, which has faced underinvestment for years.
  - \n
