

## Benefits of Migration's for Home Country

### Why in news?

\n\n

According to official sources global labour migration particularly in high-skilled jobs has escalated.

\n\n

### What is migration?

\n\n

\n

- Migration is the movement of a person or a group of people, to settle in another place, often across a political or administrative boundary.

\n

- It can be temporal or permanent, and it may be voluntary or forced.

\n

- There are two important terms that relate to migration:

\n

\n\n

\n

1. **Immigration** -Immigration is when people move from other places into a place to settle, such migrants are called immigrants, to simply put people coming in from elsewhere.

\n

2. **Emigration** -Emigration is when people move out to new places, and the migrants involved are called emigrants, to simply put people leaving their home country.

\n

\n\n

### What is the status of global migration?

\n\n

- \n
- The number of migrants with a tertiary degree increased nearly 130% between 1990 and 2010.
- \n
- Migrants of other education levels doubled, and low-skilled (primary educated) migration grew 40%.
- \n
- Digital labour markets and internet-based platforms that connect workers worldwide have also grown.
- \n
- More than half of the high-skilled technology workers and entrepreneurs in Silicon Valley are foreign-born.
- \n
- Prominent firms with immigrant chief executive officers have included Google, Microsoft and Pfizer.
- \n
- Most high-skilled migrants have come from China and India, and the receiving countries have included the US, UK, Canada, and Australia.
- \n

\n\n

### **What are the benefits of migration for the home country?**

\n\n

- \n
- Migration and resultant diaspora connections can be very important sources of brain gain as sending countries gain access to technical information.
- \n
- Impact of immigration on knowledge spillover to the countries of immigrants' origin has been shown for scientific publications and inventions.
- \n
- The availability of information and communication technologies, and easier access to the internet and smartphones, help individuals become facilitators of knowledge.
- \n
- Beyond knowledge diffusion, skilled migrants serve as effective conduits for many forms of global exchange in a networked world such as Investments, technology, and cultural norms.
- \n

\n\n

### **What is the status of Indian Diasporas contribution?**

\n\n

- \n
- Indian Migration has promoted global diaspora networks, human capital investment, circular migration, and the transfer of technology.
- \n
- Many data support that the Indian diaspora has facilitated the outsourcing of jobs to India.
- \n
- Diaspora-based contracts mainly served to lower costs for the company contacts outsourcing the work, as the developers in India are paid about the market wage for their work.
- \n

\n\n

### **What measures India needs to take to utilize its diaspora?**

\n\n

- \n
- Immigrants arriving from their origin countries might be better at expressing knowledge in a way that is more easily absorbed in their former homeland.
- \n
- These factors suggest that the amount of knowledge disseminated due to immigration could go far beyond formal scientific knowledge.
- \n
- In this process, India need to understand that the mobility of skilled workers has become critical to enhancing productivity and economic growth.
- \n
- This can enable policymakers to better integrate immigration in both origin and destination countries.
- \n
- Thus improved people allocation can be as powerful as global trade in goods, and financial allocation.
- \n
