

Challenges in Double Digit Growth

What is the issue?

\n\n

Union government is targeting for a double digit GDP growth, in real terms such growth is quite challenging.

\n\n

What is the status of India's GDP growth?

\n\n

\n

- In the last three India's GDP growth has come down from 8 per cent to 6.7 per cent.

\n

- It looks unlikely there will be big-bang growth in the next couple of years which is more likely to be gradual.

\n

- In the absence of any major disruptive policy in the coming years, the path looks to be more like 7.5-8-8.5-9 per cent.

\n

- During 2005-08 India had recorded an average growth of around 9.5 per cent, which was just before the financial crisis and in 2009-11 growth came in at just below 9 per cent.

\n

- Therefore, getting to 9 per cent does not look too ambitious, though 10 per cent would be psychologically satisfying.

\n

\n\n

What are the challenges in achieving double digit growth?

\n\n

\n

- In statistical terms size of Indian economy is quite large at around Rs.130-lakh crore and a higher base makes it more challenging to record high growth numbers.

\n

\n\n

\n

- Even a single crop failure leads to high inflation which has an impact on overall spending, interest rates and investment ultimately.

\n

\n\n

\n

- It would take 3-4 years as agriculture, industry and services need to grow at higher rates on a continuous basis.

\n

- The NPA problem, along with the requisite capital requirement, are major blockades to growth in India.

\n

- It will take another two years to resolve and hence achieving the 10 per cent mark is still some distance away.

\n

\n\n

What needs to be done to achieve double digit growth?

\n\n

\n

- **Boosting Agriculture** - In Indian economy every time agriculture slips, it has a ricocheting impact on other sectors as rural spending comes to a standstill.

\n

- Therefore, while agriculture has a 15 per cent share in GDP, it has to be kept moving independent of monsoons on a sustained basis.

\n

- **Building on industry** - Manufacturing and construction segments has to register 10 per cent growth continuously for the overall growth number to clock 10 per cent.

\n

- Government need to resolve the NPA (non-performing asset) issue and grow the bond market as funding is a major necessity for growth.

\n

- Emphasis on affordable housing can see acceleration in growth which will bode well to linked industries such as steel, cement, machinery and metals.
