

Facilitating Inter-State Mobility

What is the issue?

 $n\n$

\n

• Despite the absence of any explicit barriers to mobility, India's inter-state mobility is relatively lower.

۱n

• Analysing the reasons behind and making necessary policy alterations are essential to facilitate mobility to seek opportunities.

 $n\n$

How is the internal migration pattern in India?

 $n\$

\n

• Internal migration rates across states are **relatively lower in India** than in other many other countries.

\n

• Roughly, **internal migrants** represented 30% of India's population as per 2001 Census.

\n

- However, two-thirds of these were **migrants within districts.**
- \bullet There is a higher rate of migration from faraway districts of the same state than from nearby districts of a different state. \n
- Moreover, more than half of them were \mathbf{women} migrating after marriage.
- Notably, states with higher rates of access to higher education and public employment have relatively less student and skilled migrants moving out.

 $n\n$

• The **rate of migration** has almost **doubled** between 2001 and 2011 relative to the previous decade.

۱n

• However, labour migrant flows within states are much larger than flows across states.

\n

• Evidently, state borders remain impediments to mobility though there are no explicit barriers to inter-state mobility in India.

\n

 $n\n$

What are the reasons?

 $n\n$

۱n

 Barriers to internal mobility include physical distance and linguistic differences.

\n

• Differences in **economic and social features** among different states are also among notable reasons.

۱n

• Despite these, there are a range of other factors that works as disincentives to inter-state migration.

۱n

- **Social Benefits** A majority of social entitlement programmes are administered by state governments, even when they are centrally funded.
- In essence, many of the social benefits and entitlements are not portable across state boundaries.

\n

• Access to subsidised food through the public distribution system (PDS) is a major reason.

\n

• Evidently, in states where the PDS offers higher levels of coverage, unskilled migrants are less likely to move out-of-state.

\n

- \bullet Even admissions to public hospitals, schools, etc are administered through ration cards issued and accepted only by the home state government. \n
- **Education** Many universities and technical institutes are administered by state governments.

• Notably, state residents get preferential admission in these through "state quota seats".

\n

- The "domicile certificates" necessary for this require continuous residence in the state, ranging from 3 to 10 years in different states.
- **Employment** Though accounting for only about 5% of total employment, public sector employs more than half of the higher-skilled.
- However, in most states, more than three-fourths of government jobs are with the state rather than the central government.
- \bullet Here again, state domicile is a common requirement for jobs in state government entities. $\mbox{\ensuremath{\backslash}} n$
- Moreover, states are increasingly expanding and promoting the "jobs for natives" policies in the recent period.
- E.g. Karnataka recently directed both public and private sector firms to reserve 70% of their jobs for state residents or would lose access to state government industrial policy benefits.

 $n\n$

What could be done?

 $n\n$

\n

- India's "fragmented entitlements" should be integrated to offer citizens access to social benefits irrespective of the residing state.
- This is essential to boost growth and check poverty, by facilitating access to productive opportunities available across the country.
- A nationally portable identity could prove to be an important step.
- States should rationalise the discriminatory policies and become more inclusive in offering employment and education.
