

Growth in State Budget 2018-19

Why in news?

\n\n

According to RBI report the combined size of State budgets is bigger than that of Union budget.

\n\n

What is the status of State budgets?

\n\n

\n

- In 2011-12 size of Union Budget was bigger than that of state Budgets, since then the combined size of the state Budgets has been growing rapidly.

\n

- Last year it was 36 per cent more than the Union Budget and in 2014-15, the state Budgets size was 16 per cent more than that of the Union Budget.

\n

- As of now the combined size of the Budgets presented by 29 states of India is now at least 37 per cent more than the Union Budget.

\n

- Compared to the Union Budget size of Rs 24.42 trillion for 2018-19, the states' budget size for the current year is estimated at about Rs 33.59 trillion.

\n

\n\n

What are the insights from the recent estimates?

\n\n

\n

- For the record, the combined fiscal deficit of states and the Centre rose to a level of 6.7 per cent of gross domestic product (GDP) in 2014-15 and widened further to 7 per cent each in the following two years.

- \n
- This happened as the state budgets' deficit rose in this period even as the Union government's deficit declined.
- \n
- Overall gross fiscal deficit of states declined to 3.1 per cent of GDP in 2017-18, even though it stayed above the prudent level of 3 percent for the third successive year.
- \n
- 29 states have projected a combined fiscal deficit of 2.6 per cent of GDP, non-Special Category states on the other hand, were relatively safe at 2.9 per cent.
- \n
- Due to the roll out of the goods and services tax (GST) and its long-term benefits for state revenues, the states' own tax revenue in 2017-18 was to have risen to 6.6 per cent of GDP.
- \n

\n\n

What are the concerns with such projections?

\n\n

- \n
- There is a disconcerting gap between the projections on deficits and the actual performance.
- \n
- In particular, the period between 2014-15 and 2017-18 has seen an underestimation of fiscal deficits, leading to slippages.
- \n
- The budgeted revenue deficit has overshoot the estimates even in earlier periods and the slippages from 2016-17 also reveal a deterioration in the quality of expenditure, with the ratio of revenue spend to capital expenditure rising for all states.
- \n
- There is an acute shortage of analysis of how the states are raising their resources and spending them.
- \n
- This is largely due to a lack of a standardised format of Budget presentation by the states and unavailability of comparable numbers from all of them.
- \n
- Not every state has provided all its GST data making it difficult to capture the full impact of the new tax regime on state revenues.
- \n
- The true picture on the GST's impact on state finances will be available in 2018-19 and the verdict on the credibility of the reduced fiscal deficit

numbers will have to wait till then.
