

## IPCC Draft Report on Global Warming

### What is the issue?

\n\n

A recent Intergovernmental Panel for Climate Change (IPCC) draft report on climate change response draws global attention.

\n\n

### What is the report on?

\n\n

\n

- The report comes on the direction of the United Nations Framework Convention on Climate Change in 2015.

\n

- Accordingly, IPCC was asked to prepare a special report by 2018.

\n

- This would be on the impact if the planet grew hotter by 1.5°C over the global average surface temperatures between 1850 and 1900.

\n

\n\n

### What are the highlights?

\n\n

\n

- The basic message is that the world is not doing enough to keep the planet from heating up excessively.

\n

- If the emissions continue at the present rate, global warming will exceed by 1.5°C over the reference period by around 2040.

\n

\n\n

\n

- The current measures such as rise of renewable energy and electric vehicles are just not enough.  
\n
- The inevitable consequences will be more  
\n

\n\n

- \n
- i. floods and droughts  
\n
- ii. forest fires  
\n
- iii. islands losing ground to rising sea waters  
\n
- iv. water scarcity  
\n
- v. vector-borne diseases  
\n

\n\n

- \n
- This reiterates what the UN Environment Programme has been emphasizing in its annual Emission Gap Reports.  
\n
- In 2016 report, it said that even if countries stick to their Paris deal commitments, the target would not be met.  
\n

\n\n

## What are the concerns and challenges ahead?

\n\n

- \n
- **Paris deal** - At Paris in 2015, all countries agreed to limit global warming to 2°C by the turn of this century.  
\n
- This aside, they also agreed on an ambitious goal to limit global warming to 1.5°C.  
\n
- But the Agreement is loosely-worded, and leaves everything to voluntary action with no penal provisions.  
\n
- **US** - The United States has recently pulled out of the Paris accord.  
\n
- It has also begun to support coal, a fuel chiefly responsible for the climate

change.

\n

\n\n

\n

- Further, the US has slashed its contribution to the Global Environment Facility (GEF).

\n

- Resultantly, developed countries' funding to GEF has come down by \$300 million.

\n

- Notably, GEF is a big funder of climate projects in developing countries.

\n

- **Australia** - Australia is also following the US's example.

\n

- It has also said that coal would have an important role in the country's energy mix.

\n

- **Coal** - With US and Australia backing coal, poor countries like Indonesia are taking the opportunity.

\n

- Having seen good returns in exporting coal over the last decade, it wants to do more.

\n

- The situation is likely to worsen with the development of a new Russia-funded railway.

\n

- The railway will open up new areas of Kalimantan (Indonesian part of Borneo island) for coal.

\n

- Banks are also not doing enough to restrict funding for coal projects.

\n

- **Deforestation** - According to Stockholm Environment Institute, permits for mining cover 6.3 million hectares of Conservation Forest and Protected Forest areas.

\n

- In 2017, the tropics lost nearly 16 million hectares (size of Bangladesh) to deforestation.

\n

- **Measures** - A recent International Energy Agency report looked at 35 areas requiring action, to be consistent with the 2°C goal.

\n

- Out of the 35, only four were on the right track and these are solar PV, LED, e-vehicles and data centres.

\n

- The IPCC report comes as a wake up call for nations to relook and reassess the climate strategies.
