

## Niti Aayog on Farmer's Income

### Why in news?

\n\n

Irrigated farmland in the country must **increase by 19 per cent and availability of quality seeds by 167 per cent** if the Centre wants to double farmers' real income by 2022-23, according to a plan devised by NITI Aayog.

\n\n

### Doubling the farmer's income:

\n\n

\n

- The base year for above said calculation is **2015-16**.

\n

- The Centre has started discussions with stakeholders to devise a roadmap for **doubling farmers' real incomes by 2022-23**.

\n

- A 2012-13 NSSO survey showed the **nominal income** of farmers usually **doubled every six years**.

\n

- It pegged the average income at Rs 6,426 per month in 2012-13 against Rs 2,115 per month in 2002-03.

\n

- The Centre now wants to double farmers' real income.

\n

\n\n

### What the plan says?

\n\n

\n

- The plan says unless efficiency is achieved, the Centre will need to increase NPK fertiliser availability by 38 per cent to 36 million tonnes by

2021-22.

\n

- It also talks of the power supply needed on farms, intensity of crops and how much land will be needed for high-value crops.

\n

- Till now, most of the discussion on doubling farmers' incomes has been theoretical.

\n

- The Aayog has suggested that instead of crop-specific advice, the Indian Council of Agriculture Research (ICAR) divide farmland into clusters and suggest comprehensive packages for growth of farming in individual areas.

\n

- This could include horticulture, livestock and alternative sources of income.

\n

- The Aayog has also suggested reforming agriculture marketing, speedier adoption of a modern land lease law, private participation in direct purchase of farm produce and modern storage facilities.

\n

\n\n

## What is the Action Plan?

\n\n

\n

- Area under irrigation should be increased by **19% by 2022-23** to 110.4-mn hectares.

\n

- Availability of quality seed should increase by over 167% to around 8-million tonnes.

\n

- Unless efficiency is improved, India would need to up its NPK supplies by 39% to 36-mn tonnes.

\n

- ICAR should start giving comprehensive and exhaustive advisories for the entire farm and not just crop specific advisories.
