

Nuclear dynamics of India

What is the issue?

\n\n

\n

- Pakistan, in recent days, is showing an aggressive military strategy and continues to expand the size of its nuclear arsenal.
- It has refused to adopt the No First Use (NFU) policy, and takes undue advantage of its nuclear shield to support and sponsor terrorism.
- All these call for India to focus on its nuclear principles and respond appropriately.

\n

\n\n

What lies before India?

\n\n

\n

- India's nuclear strategy builds on the principles of restraint - credible minimum deterrence, No-First-Use (NFU) policy, non-use of nuclear weapons against non-nuclear weapon states, etc.
- Besides, despite being a non-signatory to the Nuclear Non-Proliferation Treaty (NPT), its policies are consistent with provisions of NPT.
- However, the recent developments necessitate that India should reconsider Minimum Deterrence and respond cautiously to Pakistan's tactical nuclear weapons.
- India's **nuclear readiness** should be improved.
- Also, new **arms control measures** should be considered for nuclear de-escalation by other countries.

\n

- Indian **defence planning** should incorporate an expanded role for nuclear weapons but without affecting 'credible minimum deterrence'.
- It should assess all conventional and un-conventional approaches to formulate a right response for any challenges and security risks.
- India should be aware that any sign of threat from Pakistan is also a potential one from China, a greater security challenge.
- It should thus move stronger in **persuading other countries** to restrain Pakistan's offensive behaviour in terms of nuclear policies and state-sponsored terrorism.
- And make Pakistan understand that nuclear weapons are merely to deter, and not to initiate, a nuclear war.
