

Out-of-School Children in India

What is the issue?

\n\n

∖n

• The official numbers of out-of-school children in India are contradictory in different reports.

∖n

- A recent data in this regard highlights the variations in out-of-school children proportion as well as the reasons behind. \n

\n\n

What is the contradiction?

\n\n

\n

- The 2011 Census reported the number of out-of-school children in the 5-17 age group as 8.4 crore. \n
- This stands in contrast to a survey commissioned in 2014 by the Ministry of Human Resource Development. $$\n$
- As per this, the number of out-of-school children in the 6-13 age group was only 60.64 lakh.

∖n

- This is a gross underestimation as it is unlikely that the number drastically came down from 2011 to 2014. \nphi
- Notably, there were no significant changes in objective conditions so as to bring such a reduction.

\n\n

What is the recent estimate?

\n\n

\n

- The number of out-of-school children in India was recently calculated afresh. \slashin
- This was on the basis of the 71st round of the National Sample Survey (NSS) carried out in 2014.
 - ∖n
- Children of the 6-18 age group were taken into account. \n
- It was found that out-of-school children in this age group were more than 4.5 crore in the country. $\$

\n\n

\n

- This is around 16% of the children in this age group. $\space{1mm}\space{1$
- States In some of the big States, about one-fifth of the children in this age group were out of school. \n
- These include Odisha (20.6%), UP (21.4%), Gujarat (19.1%), Bihar (18.6%), etc as also MP, Rajasthan and WB.
- In Kerala, Goa, Sikkim, HP and TN, the proportion was lower than the national average.

∖n

- **Region** Out-of-school children proportion was around 17% in rural India as against 13% in urban India.
- In rural areas, the proportion of out-of-school girls (18.3%) was higher than of boys (16.3%).

\n

- Groups The proportion of children from Scheduled Castes and Scheduled Tribes (SC/ST) was the highest. γn
- This was followed by Other Backward Classes (OBCs).
- Among religious groups, the proportion of Muslims was as high as 24.1% in rural areas and 24.7% in urban areas. \n
- In all, the data show that out-of-school children came mostly from the rural areas.

\n

• Also, a high proportion of them are SCs, STs, Muslims and from other

economically backward communities.

∖n

- These children were mostly from low-income, landless and marginal families. $\ensuremath{\sc n}$
- Most of these children's parents were uneducated and mostly casual labourers.

\n

\n\n

What is the Telangana Report's finding?

\n\n

\n

- The Telangana Social Development Report, 2018 brought out key patterns in this regard.
 - \n
- The prejudice against educating girls that is prevalent in India is a major reason for children being out of school. \n
- According to the report, a proportionately larger percentage of girls than boys was not enrolled. \n
- In the rural areas, the gender gap on this count was as high as 13 percentage points. $\$
- A relatively lower percentage of girls was found going to high fee-charging private schools.
- Similarly, a relatively lower percentage of girls took private coaching, involving additional costs.
- A much higher proportion of girls than boys dropped out of school after Class 10.
- Notably, after this, education is not necessarily free.
 - n n Tolongon
 - In Telangana, the average expenditure on the education of girls was less than that for boys.

\n

\n\n

What are the driving factors?

\n\n

\n

• Work - A key reason for boys to drop out of school was to take up jobs to supplement the family earning.

\n

- For girls, it was the compulsion to participate in household work. $\ensuremath{\sc n}$
- Under RTE and Child Labour (Prohibition and Regulation) Amendment Acts, these children fall under 'child labour' category. \n
- Ultimately, the largest number of child labourers in the world is in India. \n
- **Policies** The shortfalls in implementing all the provisions of the RTE Act within the time limit is a key reason. \n
- + E.g. the Act provided for the availability of a school $\normalized{\normal$

\n\n

\n

- i. at a distance of 1 km from the child's residence at the primary level n
- ii. at 3 km from the child's residence at the upper primary level n

\n\n

\n

• If implemented, a major reason for drop-out (distance of school) would have been eliminated.

\n

\n\n

What does it call for?

\n\n

\n

• A large number of children being out of school is a matter of serious concern to the country.

\n

• This is particularly even after the RTE Act being in place, and elevating RTE as a fundamental right.

\n

• Implementation of provisions of the RTE Act in its true spirit is the need of the hour.

\n

• Besides, an important reason for drop-out is the socio-economic conditions of

the parents.

\n

- There are clear evidences of a positive correlation between economic incentives and a lower drop-out. $\gamman{\label{eq:lower} \begin{aligned} \label{eq:lower} \begin{\label{eq:lower} \begin{\label{label{eq:lower} \begin{\label{label{label{eq:lower} \begin{\label{label{label} \begin{\label{label{label{label} \begin{label{label{label} \begin{label{label{label{label} \begin{label{label{label{label} \begin{label{label{label} \begin{label{label{label{label} \begin{label{label} \begin{label{label{label} \begin{label{label} \begin{label} \begin{label{label} \begin{label{label} \begin{label{label} \begin{label{label} \begin{label} \begin{label{label} \begin{label{label} \begin{label} \begin{label{label} \begin{label} \begin{label} \begin{label} \begin{label{label} \begin{label} \begin$
- This calls for a more comprehensive approach that is not reflected in the RTE Act. \n
- An important provision which ought to have been in the RTE Act is financial support to poor parents.
 - \n
- Awareness generation on the importance of school education and on the fact that education is now a legal right is essential. \n
- \bullet Ironically, education is both the means and the end for this. \n
