

# **Perplexes with Geo-spatial Information Regulation Bill, 2016**

### What is the issue?

\n\n

∖n

- Ministry of Home Affairs in 2016 had released the draft Geospatial Information Regulation Bill (GIRB).  $\n$
- Strict regulations imposed on geospatial information by this bill has concerned tech services sector.  $\gamman$

\n\n

#### What does geospatial information mean?

\n\n

∖n

- Geospatial imagery or data acquired through space or aerial platforms such as satellite, aircrafts, airships, balloons, unmanned aerial vehicles.  $\n$
- Graphical or digital data depicting natural or man-made physical features, phenomenon or boundaries of the earth.  $\n$
- Any information related thereto including surveys, charts, maps, terrestrial photos referenced to a co-ordinate system and having attributes.

\n

\n\n

### What is the purpose of geospatial information regulation bill?

\n\n

∖n

• After the January 2016 Pathankot attack, Ministry of Home Affairs made a

regulatory attempt in the geospatial industry for maintaining national sovereignty over India's geospatial data.  $\n$ 

- According to the draft, it will be mandatory to take permission from a government authority before acquiring, disseminating, publishing or distributing any geospatial information of India.  $\n$
- In simple terms, any addition or creation of anything that has to do with any geospatial information within the territory of India will need the permission of the government.  $$\n$
- A Security Vetting Authority will be setup for this purpose, it grants licenses to organisations/individuals who want to use geospatial data.  $\n$
- It will check the content and data provided and make sure it is well within national policies.

\n

\n\n

# What are the strict limitations imposed by the bill?

\n\n

\n

• Illegal acquisition of geospatial information of India - Fine ranging from Rs. 1 crore to Rs. 100 crore and/or imprisonment for a period up to seven years.

\n

• Illegal dissemination, publication or distribution of geospatial information of India - Whoever disseminates, publishes or distributes any geospatial information of India shall be punished with a fine ranging from Rs. 10 lakhs to Rs. 100 crore and/or imprisonment for a period up to seven years.

\n

• Use of geospatial information of India outside India - Fine ranging from Rs. 1 crore to Rs. 100 crore and/or imprisonment for a period up to seven years.

\n\n

## What are few shortfalls with the bill?

\n\n

\n

- The home ministry made its attempt to draft the bill soon after the 2016 Pathankot attack and it was drafted with a short sighted view.  $\n$
- Usually any mapping process in India will be taken care by the Survey of India (SOI) and digital approaches regarding those lies with the department of science and technology (DST).  $\n$
- This draft bill was made with a negligible role of SOI, but much of its initial framework comes from bureaucrats within the defence ministry.  $\n$
- The MOD has a large number of grievances when it comes to mapping and geospatial data.

\n\n

## What are the concerns of tech industry over the draft bill?

\n\n

\n

 $\bullet$  In India, location services are very dynamic and the ecosystem is still evolving as most of the commuters solely believe in mapping and navigation apps for their day today commute.  $\n$ 

\n\n

\n

- In this stage Satellite-makers, online map companies and GPS providers are bemused with the manner in which the draft GIRB was drafted.  $\n$ 

\n\n

∖n

 It is also said that once implemented the bill could negatively impact some of the key programmes of Union government which entirely rely on location based inputs.

\n\n

\n

\n

• Thus the only demand of the tech industries is that any new regulation on location-based services should ensure that the pace of innovation is not impacted.
