

## Preventing Post Harvest Losses

### What is the issue?

\n\n

Despite India's considerable agricultural produce, the inadequacies in harvest and post-harvest stages lead to huge losses.

\n\n

### What are the concerns?

\n\n

\n

- India is one of the largest producers of over 80% of agricultural products, including some cash crops.

\n

- Conversely, harvest and post-harvest losses are a constraint in reaping the full benefits of the produce.

\n

- Post-harvest losses vary depending on crops, agricultural practices, climate, etc.

\n

- However, inadequate storage and transportation facilities are primary reasons in most cases.

\n

- **Storage** - Most harvested grains, fruits and vegetables are stored in traditional structures, made of grass, wood or mud.

\n

- Lack of scientific design make them susceptible to pest attack and decay.

\n

- Only 10-11% of fruits and vegetables cultivated in India use cold storage, due to the financial and infrastructural inadequacies.

\n

- Resultantly, a bulk of stored commodities is lost to insect infestation, rotting and mould growth.

\n

- **Financing** - Due to excess supply in the market immediately after harvest, farmers do not realise the best price.  
\n
- But to prevent storage loss, farmers are compelled to sell their produce immediately, within days of harvest, at any prevailing rate.  
\n
- **Transport** - Transferring goods from cultivation centres to processing centres or markets is another impediment.  
\n
- Inadequate transportation infrastructure lead to damage of commodities.  
\n
- Also, heat and humidity, in the absence of cold chain transportation, spoil the produce.  
\n

\n\n

## What should be done?

\n\n

- **Storage** - Technology intervention is essential to improve the storage structures and logistics.  
\n
- Adequate cold chain and scientific storage infrastructure facilities are required.  
\n
- It prevents storage losses and facilitates funding of post-harvest activities.  
\n
- **Funding** - Warehousing receipts, from certified warehouses, can be used as collateral for funding from banks, etc as provided by Warehousing (Development and Regulation) Act of 2007.  
\n
- Access to funds can enable farmers meet the consumption and working capital requirements.  
\n
- They can also monitor market prices and sell their produce as per their preference, when prices reach profitable levels.  
\n
- **Transport** - Use of enclosed structures and cold chain transport facilities can reduce post-harvest losses due to transportation.  
\n
- Freshness of fruits and vegetables and seed viability can be ensured.  
\n
- In all, preventing post harvest losses can increase farmers' revenues and can

also notably aid the food security initiatives.
