

Railway Reforms - Intra Organisational Synergy

What is the issue?

\n\n

\n

- Safety in the Indian Railways have always been a challenge. \slashn
- Compartmental functioning of various departments of the railways has been identified as the major reason. \n

\n\n

What does the Khatauli derailement say?

\n\n

\n

- Track repairing staff didn't get a permitted block by the traffic department. $\slash n$
- So they took the risk of carrying out their work without stopping movement of trains.

∖n

- This led to the derailment of Uttkal express at Khatauli in UP killing 23 people and injuring many \n
- This has highlighted the lack of co-ordination among departments within the organisation.

\n

\n\n

What is current status of the railways?

\n\n

\n

• Indian has over 90,000 km of railway tracks and hundreds of trains hurtle across, carrying millions of passengers.

\n

- The traffic load on the Indian Railways is ever increasing with some routes nearly reaching saturation level. \n
- This leaving little cushion for maintenance.
- Also, the tracks are currently under great pressure after the 2005 increase of the permissible loading capacity for each wagon. \n
- Large projects to relieve the pressure, like the construction of dedicated freight corridors are in the pipeline, but will take time. \n

\n\n

What are the issues with 'Debroy Committe' suggestions?

\n\n

∖n

- In 2014, Debroy Committee was set-up suggest reforms and break the compartmentalisation of operations in the railways.
- \bullet Its final report suggested big structural changes and called for the introduction of 'management generalism' as against specialisation. \n
- One suggestion even called for the merger of all Group 'A' ngineering & civil services of the railways into one unified service. \n
- **Drawbacks** These suggestions are immature as present system was evolved to handle the enormous size of the Indian railways. \n
- It is also rooted in the belief that specialists are too technical to have a strong vision, which is fundamentally wrong. \n
- Also, reducing departments for better co-ordination in a massive organisations like the railways is not desirable. \n
- If accepted, this could lead to the erosion of accountability and would be disastrous for railway safety & management. \n

\n\n

What is the way ahead?

\n\n

\n

- A mechanism for departments to flourish and voice their genuine concerns is what is needed for enhancing co-ordination. \n
- Ultimately, appropriate powers should be vested in the DRMs, GMs and the Railway Board for hazzle free decision making.
