

Reasons and Implications of Rising Oil Prices

Why in news?

\n\n

The international benchmark for oil prices crossed \$80 a barrel touching the highest level since 2014.

\n\n

What are the concerns with rising oil prices?

\n\n

\n

- Brent, the international benchmark for oil prices is almost three times the cost in early 2016 when it was \$29 a barrel.

\n

- The trend may continue in the coming weeks and months, according to most reporting on oil.

\n

- Rising oil prices could cause significant inflation, dampen economic growth and alter geopolitics in multiple ways.

\n

\n\n

What are the reasons behind increasing oil prices?

\n\n

\n

- **American Factor** -U.S. Administration's decision to withdraw the country from the Iran nuclear deal.

\n

- Sectors such as financial and banking, underwriting services, insurance, shipping and shipbuilding and port operation will come under US sanctions all of these will influence oil trade.

\n

- US administration is also threatening unstable Venezuelan economy which is dependent on petroleum exports with new sanctions.
\n
- **Russian Factor** -Oil prices are also driven up by coordinated action by Russia and Saudi Arabia to keep supply on a tight leash.
\n
- The heightened instability in West Asia in the form of Saudi Arabia-Iran rivalry and the looming possibility of new military conflicts add to this.
\n

\n\n

What is the reaction for US decision among global economies?

\n\n

- \n
- European countries, Russia and China, who are part of the Iran deal, have said they will not participate in American sanctions.
\n
- It is unclear how far European companies could withstand American pressure and continue trade with Iran.
\n
- French oil company Total has announced that it will halt a natural gas development project in Iran unless it receives a waiver from the U.S. government.
\n
- China will continue to buy from Iran and so will India, even if in reduced quantities.
\n

\n\n

What will be the implications of this?

\n\n

- \n
- India imports significant quantities of oil from Venezuela and Iran.
\n
- The full impact of re-imposition of sanctions on Iran will have a serious impact on Chabahar port in Iran which was built with Indian aid.
\n
- Instability in oil prices could help America's strategic rivals Russia and China.
\n
- Russia could benefit from higher prices in the international market.
\n

- China could get better deals in buying crude cheap from Iran as it could insulate the trade from secondary American sanctions.
\n
- Higher oil prices could have mixed impact domestically in America due to increasing demands.
