Regime Change in Chile

Why in news?

\n\n

Centre-right politician 'Sebastián Piñera' has been elected as Chile's President recently.

\n\n

\n\n

What is significance?

\n\n

- \n• Chile is undergoing rapid political transformation, due to the recent introduction of proportional representation system.
\n
- This has effectively ended the two-party dominance characteristic of the past 3 decades and accelerated the assertive emergence of leftist politics.
\n

- Notably, the left drives its support base from the new middle classes that shot to prominence during the South American commodities boom of past decade.
\n
- The new government is expected to prioritise the establishment a constituent assembly to draft a new Constitution as promised.
\n
- Also, Mr. Piñera's victory raises expectations of the country's return to the robust economic performance, which currently below 2%.
\n

\n\n

What would be the foremost challenge?

\n\n

- \n
- Chile's mining lobby wants regulations on permits to be eased, in order to capitalise on global demand for copper – a major export commodity.
\n
- Mr. Piñera also promised easing labour regulations and reducing corporate taxes in the run-up to the elections.
\n
- While fulfilling these promises will be key to reviving growth, it won't be easy as the leftists hold a sizable strength in the congress.
\n
- As the middle class have been vouching for further improvements in welfare programs, it would be difficult to curb spending in areas like education.
\n
- Hence, Mr. Piñera will have to walk a tightrope between the competing demands of the businesses and the social welfare programs.
\n

\n\n

What is the emerging trend in Latin America?

\n\n

- \n
- With Mauricio Macri as President in Argentina, Mr. Piñera's return signals a further consolidation of the centre-right in Latin America.
\n
- This rightward political swing is expected to spread across the region, as governments scheduled to face the electorate are mired with problems.
\n
- Economic consolidation is a critical priority in the region, as effects of the

plummeting commodities markets in recent years is still being felt.
