

# **Solution to Reduce Wastage of Pesticides**

### Why in news?

 $n\n$ 

CSIR has found a lipid compound to reduce the wastage of pesticides by slippage.

 $n\n$ 

#### What is CSIR?

 $n\n$ 

\n

- The Council of Scientific & Industrial Research (CSIR) is India's contemporary R&D organization.  $\n$
- $\bullet$  CSIR's R&D expertise and experience is embodied in about 4600 active scientists supported by about 8000 scientific and technical personnel. \n
- It provides significant technological intervention in many areas with regard to societal efforts which include environment, health, drinking water, food, housing, energy, Farm and non-farm sectors.

 $n\n$ 

# How CSIR's recent innovation will reduce pesticide wastage?

 $n\n$ 

\n

- $\bullet$  The CSIR has identified a lipid compound known as Glyceryl-Mono-Oleate (GMO), a natural wax-like solid extracted from sunflower oil.  $\mbox{\sc h}$
- $\bullet$  The structure of this compound is that it's one end is hydrophilic (waterattracting) and the other end is hydrophobic (water-repelling). \n

- When this compound is mixed with pesticides, the liquid sticks to the leaves and doesn't fall off to the ground.
- When the solution was sprayed the lipid GMO nanoparticles rush to the leaf surface and quickly spread out to make a thin film on the leaves.
- $\bullet$  This thin film is hydrophilic on the outside and hydrophobic on the inside resulting in the water-pesticide mix sticking strongly on the leaves. \n

 $n\n$ 

## What is the significance of this innovation?

 $n\n$ 

\n

• The pesticides are sprayed on to the crops which increases its slippage into the ground.

\n

- This residue of pesticides then leeches to the ground, mixes with the water cycle and the food chain which has long term consequences for man.
- From economical point, large of amount of pesticides have to be sprayed to keep the plants away from insects and pests.
- $\bullet$  Since, the pesticides don't stick to the leaf, farmers locally mix pesticides with soap water which is not a viable solution. \n
- This forced the scientists to work on finding a solution for this small yet significant problem and found an innovative solution which is safe for the whole ecosystem.
