South Asia Satellite

Why in news?

\n\n

India launched 'South Asia satellite' on May 5 2017. This sends a positive signal to the neighbourhood.

\n\n

What are the facts about the satellite?

\n\n

- \n
- The South Asia Satellite (GSAT-9) is a geosynchronous communications and meteorology satellite by the Indian Space Research Organisation.
- \n
- It is launched for the South Asian Association for Regional Cooperation (SAARC) region.
- \n
- This idea was mooted by India in 18th SAARC summit.
- \n
- Afghanistan, Bangladesh, Bhutan, Nepal, Maldives and Sri Lanka are the users of the multi-dimensional facilities provided by the satellite.
- \n
- By launching the GSAT-9 'South Asia satellite', India has reaffirmed the Indian Space Research Organisation's scientific prowess, but the messaging is perhaps more geopolitical than geospatial.
- \n

\n\n

What are the benefits of the launch?

\n\n

- \n
- The benefits the countries would receive in communication, telemedicine,

meteorological forecasting and broadcasting.

\n

- China is planning to launch a cloud for the countries in the south east region, but India wisely took the lead by lunching the SAARC satellite.

\n

- It is prove once again that India is the only country in South Asia that has independently launched satellites on indigenously developed launch vehicles.

\n

- More than scientific endeavour, this geopolitically strengthens India's Strong neighbour's policy.

\n

\n\n

What is the hassle with Pakistan?

\n\n

\n

- In recent years Pakistan and Sri Lanka have launched satellites with assistance from China.

\n

- Pakistan denied the trade permission between Afghanistan and India via the land route, this created distress mong the SAARC countries.

\n

- Pakistan initially declared its intention of participating in the project, and offered India monetary and technical help.

\n

- India rejected Pakistani offers, saying that it wanted the project to be a "gift" and multi-national collaboration would be time consuming.

\n

- As a result, Pakistan declined to participate in the project.

\n

\n\n

What is the way forward?

\n\n

\n

- This the right move at right time by India as our neighbouring countries trying to seek china's help for space programs

\n

- With the GSLV launch India is showing that where it is capable its commitment to the development of its neighbours is strong.

\n

- Finally, by going ahead with the project despite Pakistan's decision to pull

out, present Government is signalling that it will continue with its plans for the neighbourhood SAARC minus one' if necessary.

\n

- It is clear from the launch that if our counterpart Pakistan fails to give Co-operation through land, we can connect with neighbouring countries through space.
