

U.S. and China - Retaliatory Tariffs

Why in news?

\n\n

Both the U.S. and China announced new tariffs on imports from each other, worsening the trade war scenario.

\n\n

What are the tariff decisions?

\n\n

\n

- U.S. President recently announced that US would be slapping \$200-billion worth of Chinese exports with 10% tariff.

\n

- The U.S. administration further said that it would raise the rate of the new tariffs to 25% by the end of 2018.

\n

- Soon, in retaliation, China imposed tariffs between 5% and 10% on \$60 billion worth of imports from the U.S.

\n

- With these new announcements, the U.S. tariffs will apply to \$250 billion of Chinese goods.

\n

- On the other hand, Chinese tariffs will apply to \$110 billion of U.S. goods.

\n

\n\n

What are the recent developments?

\n\n

\n

- In the recent period, China and the US have imposed various rounds of tariffs on each other.

\n

- It all began when US unveiled tariffs to discourage the import of [steel and aluminium](#) into the country.
\n
- The European Union also joined the trade war recently, imposing tariffs on \$3.3 billion of American goods.
\n

\n\n

What are the implications?

\n\n

- \n
- In the latest round of retaliatory tariffs, almost 6,000 items will be hit by the new U.S. tariffs.
\n
- The U.S. announcement came with a warning of pursuing phase three of tariff imposition if China took retaliatory action.
\n
- The phase three refers to tariffs on approximately \$267 billion of additional imports.
\n
- Now, with China's retaliation, the U.S. may proceed with additional tariffs.
\n
- In that case, all Chinese imports to the U.S., nearly 4% of world trade, will come under the tax net.
\n
- On both sides of the tariff war, economic pain is likely to be widely distributed.
\n

\n\n

How does the future look?

\n\n

- \n
- In the near term, the trade war will cause a shrinkage in bilateral trade volumes.
\n

\n\n

- \n
- Businesses in the U.S., China and nations with close trade links to them are likely to be in economic trouble.
\n

- Over the longer term, a reversal of the globalisation of supply chains may take place.
\n
- It could also make a significant impact on the future of the hyper-connected world of today.
\n
- China, and other nations trading with the U.S., may seek alternative markets and trading partners.
\n
- On the other hand, global institutions such as the WTO would start losing their authority.
\n

\n\n

- This would, in the much-longer term, be a loss for the world community of nations.
\n
- The rules-based world order for international trade appears to be undergoing a tough phase.
