

WTO - Strain in the Global Trading Order

What is the issue?

 $n\n$

\n

- \bullet The effective functioning of WTO has come under intense strain recently, due to the deadlock between the developed and the developing world. $\$
- Also, the US seems to want a whole new system to replace WTO, as China is posing a formidable challenge to its global dominance.

 $n\n$

What is the historical prespective?

 $n\n$

- Powerful western countries have controlled the global trade in the past 5 centuries by rules if possible, and by war if necessary.
- Between 16th to 19th centuries, Britain and other imperial powers, powered by the industrial revolution, colonised most parts of the rest of the world.
- The colonies provided the source for raw materials and also the markets for their surplus produce an arrangement that enriched their coffers massively.
- If rulers were hindering free and unrestricted trade as per the liking of the imperialists, war was used as a means to usher in political change.
- \bullet Also, wars were fought to control strategic aspects of trade, like the four Anglo-Dutch wars that were fought to control sea routes. \n
- \bullet British success in controlling the seas and its subsequent territorial conquests crowned it Britain as the undisputed power in the mid-19 $^{\rm th}$ century.

 $n\n$

How did trade policies change over the years?

 $n\n$

\n

- **The Strain** Rising awareness among the colonial masses and the spread of nationalistic was straining the earlier style of promoting trade by war.
- But trade wars continued in official policy parleys till most colonies forced their way to liberation after the end of 2^{nd} world war (WW-II).
- **New Order** The comprehensive victory WW-II victory gave confidence to the US and Britain to envision an era of rules based trading order.

 $n\n$

\n

- Notably, they had already mastered the industrial system and most of their products were invovated and mass produced efficiently and cheaply.
- Given their dominant economic position, the rest of the world was forced to buy their products out of sheer need, which obliviated the need for war.
- The best way to enhance trade was by pushing for redction in tariffs, and General Agreement on Tariff and Trade (GATT) was to acheive precisely that.

\n

- Notably, GATT member countries reduced import duties significantly during 1947-1986 period through eight rounds of negotiations.
- WTO US and EU clearly reigned over GATT's decisions, but GATT had its limitations as it formulated rules for trade in goods only.
- The growth of pharma industries and services sector mandated more extensive global trade rules for expanding American and European businesses.

- \bullet Hence, WTO was born in 1995 to replace GATT and to accommodate the new interests like "Intellectual Property Rights" (IPR). \n
- Also, the "Dispute Settlement Mechanism" was recreated as an efficient body for disputes resolution with the provision for appeal.

\n

- The Constrain Believing that low import duties are essential for trade growth, US and EU committed to almost zero bound duty for most products.
- This commitment meant an acceptance in the WTO that they won't increase the import tariffs in future and hence any such move would be a violation.
- Notably, most developing countries (including China) refrained from such commitments, and hence have retained their sovereign right over tariffs. $\$
- \bullet This inadvertent pledge seems to be constraining US and EU immensely, and has caused their share in global trade volumes to fall considerably. \n
- More specifically, in the 1990s, the US and EU could not foresee the rise of China, which was to soon become the manufacturing hub of the world.

 $n\n$

How has the rise of China changed the dynamics?

 $n\n$

\n

- US and EU had got most WTO members to sign a plurilateral Agreement called the "Information Technology Agreement" in 1996.
- \bullet This was in anticipation of promoting their dominance in Computer and telecom products as most others had then lacked the technical know-how. \n
- Yet, most of the benefits of the ITA were cornered by China, which had emerged as the largest electronics and IT product exporter by a big margin.
- By 2010 it became a leading supplier of computers, mobile phones, washing machines, TVs, organic chemicals, steel and many other items of everyday use.

- It produces everything from capital-intensive products like factory machinery to labour-intensive products like shoes and umbrellas.
- China made its own rules for conducting trade by offering free land, power, tax breaks and cheap labour to entice the MNCs to invest there.
- \bullet Wherever necessary, it also stole "intellectual property" (in violation of the IPR agreement) and forced technology transfer obligations at times. \n

Why and how is WTO getting undermined?

 $n\n$

\n

- \bullet Presently, US and EU are unable to bully the developing countries like India and China the way they have been doing earlier. $\$
- Also, as the decision-making process is consensus-driven, it leaves no scope for unilateral pushing of the agenda by mussling a majority.
- Hence, the US and the EU have probably decided that the WTO in its current avatar is of no use to them, which explains Trump's attempts at weakening it.
- His decision to impose import duty on steel and aluminium from China violate the USA's commitment to "ZERO duty" made at the WTO in 1995.
- \bullet Notably, Trump used the 'threat to national security' clause, for imposing tariffs, which is a last resort for exceptional circumstances. \n
- US has also been blocking the appointment of members to the Appellate Committee, which is increasing case pendency and choking the system.

 $n\n$

How is the dispute shaping up at WTO summits?

 $n\n$

\n

 There have been serious contestations between the developed and developing countries regarding agriculture subsidies and their classifications.

\n

- Notably, developing countries (lead by India) are arguing for renegotiating the "Agreement on Agriculture" which they feel is favouring rich counties.
- But contrarily, with little regard for these concerns, the richer countries want to push through newer domains like e-commerce, and investment facilitation.

\n

 \bullet The stalemate is only growing stronger and global trade is expected to be the first causality of the weakening international system. \n Also, while a major trade war between US and China seems inevitable, India may probably remain a keen bystander that is focused on its internal economy.
