

→ one goal, (Trade Production & other costs should be minimized)

→ Regional wise distribution (due to geographic status)

Challenges:

→ Developed vs developing clash would happen (who would take

Responsibility)

→ Practically many countries did not have ^{good} diplomatic relations with other nations

→ China setup their own AIIECO (Hence co-operation is Questioned)

→ many countries doubt as the power will be through underground cables which may be difficult → Economic status of some nations

Why OSWOS

→ Cost is shared hence equal distribution of funds
→ It would expect to fall by 5%
→ Power deficit is Considerably reduced

→ Nearly ~~that~~ ^{almost} half of the world gets power

→ Surplus is given to other countries facing shortage

→ Literally no Biasing (very low) Equal supply

→ For efficient and utilization of Natural and Renewable source
Power shortage in future is Considerably reduced
