India needs long term Planning of economy. Do you agree with this view. Pro/Con Comment

De-Carbonization is the regulation or strict control over the emission of Carbon ~~to the~~.

De-Carbonization is the complete cut off of Carbon usage as PM announced at global (Net-zero) emission by 2070. But de-carbonization Policy involves proper planning and

Implementation

Sectors involving :

1) Power generation plays a major role in usage of oxidative emissions by burning fossil fuels like Coals. (Especially non-renewable Source)

2) Transportation which includes Public transport and mass movements of vehicles which releases (CO) Carbon monoxide and other toxic

Bleakars  
3) Electrical appliances usage of AC and fridges in in numbers which has adverse effects on atmosphere

Alternatives :

→ Switching to Renewable Source of energy (Ex: In Power

Sectors shifting to Nuclear, wind and hydro power stations

→ Electric vehicles plays a crucial role in rapid control of

Carbon At present BSVI emission Regulation is followed.
