

Present Scenario:

- Govt of India Announced a Solliance, Integrated Solar Alliance with USA

De. Shifting to Solar Power

• India has been in Nuclear Programme, but yet to complete stage 1 which is Thorium based fuel reactor (Another step in de-carbonization)

Challenges:

- Geographically important factor is population (nearly equals to china)
- Next important thing is 'Industrialised Area' needs to be monitored first
- De-carbonization involves a slow and steady process. Understanding Root and applying it is quite difficult

• The overall development of Nation solely depends on Participation of all ~~class~~, short term goals is not possible at present circumstances

• Yet long term policies only implemented through 'step by step'

• Procedure depends on the Outcome of Initials and latter stages
