Environment

Q Cooperatives have set the agenda to collectively provide solutions to the looming impact of climate change and environmental degradation. Examine.

Cooperative societies are given importance in our constitution in Article 19 and also in Directive principles are autonomous organisations which are meant to improve the social well-being of rural India. Now they also undertook tasks to socio-economic upgradation for combating climate change.

Climate change and India goals.

Climate change is an important topic which is talked of in international forums and India is also affected by climate change (e.g. variation in monsoon etc). So India set goal for net zero neutrality in 2070 and we are working for achieving it.

Cooperatives also take part in achieving the goal.

Cooperative Society role in climate change mitigation

- * Desuoms which is a cooperative formed in Dhundi village in 2016 is first cooperative to use solar for irrigation and they earn money by selling excess energy.
- * Satara society of cooperative maharashtra is involved in the well rejuvenation and ground water level improvement.
- * Indian Farm forestry cooperative involved in the afforestation of trees in central India Rajasthan etc.
- * Self employed women association are involved in the rejuvenation of water table, work in the conservation of energy.

Conclusion
Cooperative society are the important organisation as they are economical equitable and social upgradation group. Now their involvement in the climate change mitigation is very important to note.
