India needs to adopt a rigorous dashboard based approach towards environmental indicators. Do you agree. Comment.

India scored the lowest rank of 150 in the Environmental Performance Index. It is high time a dashboard based approach be adopted at national level.

EPI data and approach

In the new metric the weight of calculation has increased. The report seeks reduction in CO<sub>2</sub> stock of underdeveloped countries.

So, per capita carbon emission with pollutants and levels data regarding emissions. dashboards can provide

Recently Charanjit Singh embraced per capita emission calculation

India was ranked laggards at  
beam protection and low PARI score  
Protected area representativeness Index of 0.5  
methods such as myambor can be  
integrated with smart cities mission and  
national mission for green India.

The emissions from buildings can be  
greatly reduced as they are one of  
the primary reasons for air pollution. The  
Shunya labelling programme can be enhanced  
as a national dashboard for green buildings.

Also, robust solar roof top ~~can be~~  
scheme has to be leveraged to achieve  
the Panchsmit principles and better  
results in any scientific ranking in  
the coming years.
