The Green Open access rules 2022 is a framework with potentially game changing implications in RE sector of the country. Analyse.

In order to accelerate the green energy adoption, Government had notified green open access rules to ensure access to clean energy.

A game changer

allowed to any consumer, especially industries and the limit has decreased from 1 MW to 100 kW

The approvals of renewable energy plants will be given within 15 days.

monitoring of timelines will be done using proposed central nodal agencies.

Industries consume 45% of power generation. CO<sub>2</sub> can reduce the cost of power especially for cement, steel, aluminium. The operating cost of plants will also come down by more than 50%.

Cross subsidy shall not be applicable if green energy is used to produce green hydrogen.

Concess State discoms have to implement the scheme to become fruitful. State discoms will not lose high paying customers like industries.

The green open access rules are in right directions to achieve our climate goals pledged at CO<sub>2</sub>, 26 and also supports industries.
