

Cyber Security System needs to be the primary focus for rapidly digitizing Banking, Financial & Insurance System

Malware :- A Anti virus or Anti virus software not being installed can lead to virus manifestation to system via downloaded

Phishing :- Invited to hacker's URL website to hack the user details on 'One click'.

Spoofing :- Foot proofing like the original website & URL

Unencrypted data :- Mass usage of data when unencrypted then the hacker accessing of data becomes important.

## ~~The~~ CAUSES:-

- \* Also budget allocation for cyber security
- \* Identity & access management is inefficient
- \* Usage of unencrypted data
- \* Non usage of anti virus
- \* Addiction for more usage of social media
- \* Non awareness about cyber attacks.

## Things OVERCOMING MEASURES

- \* Machine Learning & Big Data Learning should be encouraged
- \* Integrated security of data should be executed
- \* Usage of malware protecting software
- \* Enough awareness needs to be created
- \* End point protection / encryption is must
- \* Encrypted data should be used.
