

As the country faces an employment problem, skill development for youths has to be based on future employability. In the context of pandemic. Analyse

According to International Labour Organization more than 30 lakh people lost their employment in India due to pandemic.

Addition to this another million job losses can be predicted in post pandemic due to change in work nature, skills etc,

Even though India provided vocational training through Pradhan Mantri Kaushal Vikas Yojana, ~~future~~ employability skill development must be based on future employability

- * Post pandemic, people prefer to work near their native places, thus skill training opportunities closer to home through mobile skilling centres
- * Skill of today may be useless for next year training in future technology like Artificial intelligence, big data, block chain is needed

- * As culture of work from anywhere developed compares need to ensure opportunity & necessary infrastructure to their employees
- * There is a big gap in graduates & required professional skills, require dedicated skill university with collaboration with industries
- * Focus on skills which are necessary to cope up with Industrial revolution 4.0
- * Vocational training at early age as recommended by National education policy 2021
- * Developing IT technologies to provide online skills programmes

In order to reap of fruit of demographic dividend & to achieve 5 trillion economy by 2024 India needs to train the youths on future employability
