

The Supreme Court's digitalisation vision is expected to improve access to justice in country. Substantiate (200 words)

Digitalisation refers to "conversion of information into digital format". In the near future digitalisation can play a huge role in areas like Supreme Court where large data is handled. Understanding this Supreme Court's Digitalisation Vision was ~~is~~ introduced. The phases I and II focused on setting up of hardware, internet facilities, digitising case records and the ECourts Services app. Currently in the Phase III it is expected to create an interactive ecosystem for justice delivery.

Once it is fully furnished it will benefit wide range of stakeholders in access to justice.

- Better scheduling mechanism, online digital filings, digital orders in multiple languages will improve access to justice.
- Different medium of hearing will improve the process understanding by normal people.
- Since the structure of cases are in uniform format a better tracking of cases is enable.
- Proactive alerts and information about the cases will increase transparency and accountability of judicial department.
- As the flow of case is fully digitised and in a unified platform judges ~~are~~ will be able to delieve better judgements.
- Since hearings can be digital the cost of procedure for all people is same as they are able to access justice from anywhere. This improves inclusivity.

Thus proper digitisation and removing the hurdles like digital divide, data privacy, "Supreme Court's Digitalisation Vision" will ensure improved access to justice.
