

There is a need to create a Statutory body for Independent regulatory oversight of social media platforms. Do you agree with this view? Analyse.

With the total world population being 7.9 billion there are 6.5 billion people engaged in social media in one way or another so anything bizarre on social media could have effect immediately on the world.

Like all things social media has its own pros & cons which has both positive & negative effect.

There is a definite need for a statutory independent regulatory body over social media as in the 21st century the crimes are more likely in the cyber space.

Why a Regulatory body needed?

→ Private company motive is always based on Profits & with such motive ~~data~~ crimes like data theft, liberty suppression, online bullying can be common

→ If anyone is going to regulate it should be electd representative authority not some billionares

→ To act as an adjudicating body for crimes & use of cyberspace

→ Need for the protection of Freedom of Speech.

→ With the latest technology like Internet of Things (IoT), Meta, virtual Reality, Augmented Reality being developed its safe to say that the future is practically going to live within social media & any lawless place is bound for Anarchy so Need for Regulation is imminent.
